Blue Max® Regular Grade
Basement & Foundations
Waterproofer

**Features:**
- High Strength Liquid Rubber
- High in solids
- Water-based
- Water clean up
- Easy application
- Pour out and rolled, brushed, or sprayed.

**Benefits:**
- Flows into cracks and crevices as a liquid and sets up as a durable rubber to seal leaks.
- Expands and contracts to resist cracking and peeling
- Creates and impervious membrane
- For Extreme waterproofing situations
- Up to 1200% Elastomeric

**USEFUL FOR:**
- Basements
- Cellars
- Foundations
- Below Grade Walls
- Cisterns
- ICF
- Plywood
- Concrete

Ames Research Laboratories, Inc. is a green manufacturer of premium grade, elastomeric coatings, sealants, and paints for waterproofing roofs, walls, decks, basements, and many other surfaces. We are experts with over 30 years of experience in waterproofing. Our impervious coatings are the highest quality on the market today. All products are water-based, water clean-up, and contain no harmful petroleum or silicone.

Elastic! Adhesive! Impervious!

Maximum Waterproofer

Waterproofing that really works!

1891 16th St. SE Salem, OR 97302

VOC less than 25g/liter

Veteran Owned Business

Proudly MADE IN THE USA
1. Surface Preparation

Wire brush any loose flaking material off the surface, and remove any dust or particles. Caulk all cracks greater than 1/8” wide with Ames’ Blue Max Trowel Grade and allow to dry. Always run a test patch first, in an inconspicuous area, to ensure proper adhesion and drying, and that the product performs to your satisfaction. Be sure that surface is clean and dry before applying the coating. Do not use any soaps or detergents to clean surface.

2. Prime & Seam Tape

Prime all inside 90° angles and joints with Blue Max Regular Grade, and let dry. Apply Ames’ Peel & Stick Seam Tape™ to primed areas. Repeat steps with any other cracks or joints on surface. Ames’ Peel & Stick™ Seam Tape is available in 2” (PS250), 4” (PS450), and 6” (PS650) widths. (See Seam Tape label for instructions.) Apply a liberal topcoat of Blue Max over the Seam Tape and allow to cure. Blue Max is self-priming.

3. Application

Apply Blue Max to the surface using a standard paint roller at the rate of 1 gallon per 100 sq. ft. per coat. We recommend 2 coats minimum or 3 coats for water tanks and cisterns. Blue Max is an elastomeric, and therefore dries slightly tacky. It may be top-coated on roofs with Maximum-Stretch®, and on basement walls with Block & Wall® or Paint & Prime®. When used on roof decks, Blue Max is top-coated with Safe-T-Deck®. Blue Max needs to be top-coated in applications with direct sun contact to protect from UV degradation. Applications below ground, such as ICF (insulated concrete forms) and water tanks or cisterns do not need to be top coated.

Application Tools
You may need one or more of the following:
- 3”–4” Wide Paint Brush
- Ames Peel & Stick Seam Tape
- Scissors or Utility Knife
- Low Nap Roller & Handle
- Trowel
- Commercial Airless Spray

Estimated Coverage
Standard product coverage on a smooth surface is 100 sq. ft. per gallon per coat (est. 10 mil). More than one coat recommended. More coats equal longer life Rough surfaces will require additional product and drying time.

Adhesive Strength: 80 PSI
Blue Max has been tested up to 35 ft under water
